1 Maintenance Requirements

1.1 Short Summary

The installation of this maintenance consists of the following steps:

1. **Installation of the Release 24.1 software incl. database updates** by the IT division (see separate documentation "Release 24.1 - Technical Installation Instructions")
2. **Start of the release migration program (pt. 2.2) by the operating division**
3. **Adjustment of customer specific authorisation groups (pt. 2.3) by the operating division**

The complete (new) installation of IDL products is described in the document "doku\Installation\ENG\IDL Konsis - Installing the application.pdf".

1.2 Release Prerequisites

The Release 23.1 from March 2023 is minimum prerequisite for the installation of Release 24.1.

2 User Related Installation Activities for Release 24.1

This step of installation should be executed by the operating division. It can be performed on the server or a client.

2.1 Running the Release Migration Program

The release migration has to be principally performed as the first step after installation of a new release. Therefore a message box is output at the first call of IDL Konsis and Forecast after installation reporting that the migration has not been performed yet. This message box contains the button <Start migration now>. The migration is automatically started when pushing this button. IDL Konsis and IDL Forecast has not to be restarted after successful processing of the migration, but rather all application functions are available at once.

If the migration is not invoked this way, e.g. because of missing user authorisation, the call of other application functions is locked. Only applications for maintenance of authorisation data are exempted in case, that the user has no authorisation for starting the release migration because of usage of individual authorisation groups. IDL Konsis and IDL Forecast has to be restarted after manual invocation of the release migration for having access to all application functions.

For the manual start of the release migration program either you enter "KONVERT" in the short name input field, or you select the menu item <Release conversion> (below <System administration> --> <Extra Functions>) in the resource tree displayed if no application has been started. Please start the release migration with a double mouse click on the line with key KONV2401.

If the line with this menu id is not displayed, then the authorisation is missing. The migration has to be invoked by a user, who is either allocated to one of the standard authorisation groups IDLADMIN, IDLKON and IDLSYS or to an individual authorisation group with reference to one of these standard authorisation groups.

2.2 Maintenance of Customer Specific Authorisation Groups

The following menu IDs are new or include new authorised actions in this release. If completely maintained customer-specific authorisation groups are used, you might need to enter access rights for these menu items (BENMEN). In most cases, the menu authorisations of the user group IDLKON can be used as a template. The list contains all changes since the last major release (23.1).

- BUCHDEF - Voucher and Posting Rules
- CHKBUC - MAJ indication de la cohérence des données l'écriture
- DKREL23.2 - Release Notes IDL Konsis, Forecast, Xlslink 23.2 (German)
- DKREL23.2E - Release Notes IDL Konsis, Forecast, Xlslink 23.2 (English)
- DKREL23.3 - Release Notes IDL Konsis, Forecast, Xlslink 23.3 (German)
- DKREL23.3E - Release Notes IDL Konsis, Forecast, Xlslink 23.3 (English)
- DKREL23.4 - Release Notes IDL Konsis, Forecast, Xlslink 23.4 (German)
- DKREL23.4E - Release Notes IDL Konsis, Forecast, Xlslink 23.4 (English)
- DKREL24.1 - Release Notes IDL Konsis, Forecast, Xlslink 24.1 (German)
- DKREL24.1E - Release Notes IDL Konsis, Forecast, Xlslink 24.1 (English)
- GENBEBUMEN - Create vouchers and postings
- GENBELBUCH - Generate vouchers and postings from rules
- HOME - Home Page Web Application
- IMPTAB169 - Overview importtable-data-ABR-I169
- KONV2302 - Migration program for release 23.2

- KONV2303 - Migration program for release 23.3
- KONV2304 - Migration program for release 23.4
- KONV2401 - Migration program for release 24.1
- METDEF - Metrics and Units
- METCONV - Conversion Factors
- SKDEPLOY - Starter Kit Deployment
- WSSKDEPLOY - Web services for starter kit deployment

The following menu IDs are deleted with this release. Please remove all individual usages of these menu IDs (authorisations, menu structures) **before** installation of this Release:

- AGG - Positions
- AGGE - Position
- BSGE - Posting key grouping
- BSL - Posting keys
- BSLE - Posting key
- BSLUAW - Posting key conversion rule
- EAICLOCK - Lock intercompany account balances
- EAICUNLOCK - Unlock intercompany account balances
- KTKGRAPHCC - Circle tree
- KTKGRAPHCO - Organic tree
- POSKTOKONV - Position/account allocation list for conversion
- POSKTOP - Positions+accounts allocations - periodic display
- POSKTOPE - Positions+accounts allocation - period
- RPGE - Group of report
- SBE - Development areas
- SBEE - Development area
- SSP - Columns of transaction development
- SSPE - Column of transaction development
- TXTLTW - Import deferred taxes accumulated deficit

2.3 Documentation of this Release

You find the documentation "Release Notes 24.1 IDL Konsis, Forecast, XIslink" in the downloaded installation directory in the file doku\release\Release_Notes_IDL_Konsis_Forecast_XIslink_24.1_english.pdf.

3 Further Notes

3.1 Note on Java Version

This Release uses version 17 of Java. For the application server, the client and the Launcher we deliver the corresponding JRE (Java Runtime Environment) in the installation directory.

4 Check List

4.1 Prerequisites

1. Release 23.1, 23.2, 23.3 or 23.4 is installed?
2. Did you concern the advices in this documentation?
3. Has the technical installation of Release 24.1 been performed by the IT division without errors?

4.2 Completion of the Installation by the Operating Division

1. Did you start the migration program (KONVERT/KONV2401) without errors after start of the updated IDL Konsis and Forecast?
2. Did you maintain customer specific authorisation groups?
3. Has the documentation "Release Notes 24.1 IDL Konsis, Forecast, XIslink" been read and considered for the further work?

Good success with the new release wishes
